

Pinnacle Security Incident Report Oct 2024

Case: pinnacle-data-breach | Category: INCIDENT_REPORT

PINNACLE SECURITY INCIDENT REPORT

Incident date range: October 4, 2024 through October 9, 2024.

Attack vector: Credential stuffing against customer support accounts.

Records affected: Approximately 12,000 customer profiles, including names, emails, support ticket metadata, and partial account identifiers.

Containment steps:

- Disabled affected credentials.
- Forced password reset for support staff.
- Expanded MFA rollout.
- Preserved authentication logs for expert review.

Litigation note: Plaintiffs allege delayed notice. Defense position is that notice timing ran from confirmation of unauthorized access, not the first suspicious login alert.
